PORTFOLIO COMMENT - MORTEN E. ASTRUP (CHIEF INVESTMENT OFFICER)

Dear investor,

Storm Bond Fund was down 0.4% in November and is up 4.1% YTD.

Global equities rose modestly with US stocks advancing while European stocks retreated due to weaker corporate earnings and increasing political uncertainty among members in the European Union. Oil prices remained under significant pressure during the month with Brent Oil trading down ~20% due to increased concern about global supply and U.S stockpiles. Consequently, energy related equities and bonds came under pressure with the Philadelphia Oil Service Index (OSX) decreasing with another ~12% and Oslo Stock Exchange decreasing with more than 4% during the month. The sharp selloff in oil prices had a negative impact on the Nordic High Yield market with our peer group yielding on average -0.5% vs. Storm Bond Fund at -0.4%. Both European and US High Yield came under pressure as well this month, yielding -2.1% and -0.85% respectively.

During the month both Point Resources and Jacktel exercised their option to call back its outstanding bonds. The bonds will be called and settled in early December. We decided to roll-over approx. half of our current Jacktel exposure in a new senior secured bond. The bond carries a fixed coupon of 10% and is pledged in the company's main asset with an estimated LTV of ~60%. The unit is currently working for Equinor on the Johan Sverdrup field. Our position in VIEO (Lebara) was positively affected by the company's sale of its Spanish business at ~10x pro-forma EBITDA'18e. The transaction will release EUR 50m in cash, but more importantly support the valuation of the bond collateral. Furthermore, on the back of the aforementioned drop in oil prices our E&P and oil service exposure was negatively impacted during the month. However, the break-even oil prices for our E&P exposure is significantly lower than current levels.

With the increased market volatility, we continue to argue that being exposed to a concentrated but well diversified portfolio of solid Nordic High Yield credits with short credit duration (2.1 years) and low modified duration (1.1 years) going forward remains as an attractive investment proposition. The yield to maturity in the portfolio is 7.0%.
