COMMENT BY PORTFOLIO MANAGERS

Dear investor,

Storm Bond Fund posted a positive return of 0.5% in October and is up 12.6% YTD (institutional IC NOK share class: LU0840158496).

Equity markets had a stellar month in October driven by a very strong start to the corporate earnings season with the majority of the developed markets companies having exceeded earnings expectations for the quarter. The US and European equity markets measured by the S&P 500 and Euro Stoxx 600 index gained 6.9% and 4.6% respectively. During the month, inflation concerns increased again which caused shorter-dated yields to rise and curves to flatten reflecting expectations of higher interest rates going forward. G10 central banks have recently adopted a more hawkish tone with Norway being the first country to raise interest rates followed by tightening measures from other larger economies such as Canada and Australia among others. In the credit markets, European investment grade and high yield bonds declined by -0.7% and -0.6% respectively due to widening credit spreads paired with higher interest rates. US investment grade and high yield was fairly flat during the month with +0.2% and -0.2% returns during the period.

The fund's largest positive contribution in addition to coupon carry came from our positions in Stockmann and Ocean Yield. Stockmann reported another very strong quarterly report which significantly exceeded our expectations. The strong result was mainly driven by continued impressive performance from Lindex. The company is currently in the process of selling its properties which will result in the secured bond being paid down. According to the management the divestments is proceeding well and with good interest and they indicate deal being finalized during Q1/22. Hence, we continue to find the secured bond trading at 96.5% of par + coupon to offer very attractive return vs. the strong downside protection found in the collateral asset backing. Last month KKR announced that it had agreed to acquire and take Ocean Yield private. The transaction triggered step-up in coupon for our holding in the Ocean Yield hybrid bond which incentivised KKR/Ocean Yield to either agree with bondholders and amend the bond loan vs. compensation or call it back. After first approaching bondholders with a suboptimal amendment proposal which was not accepted by us and the other holders,

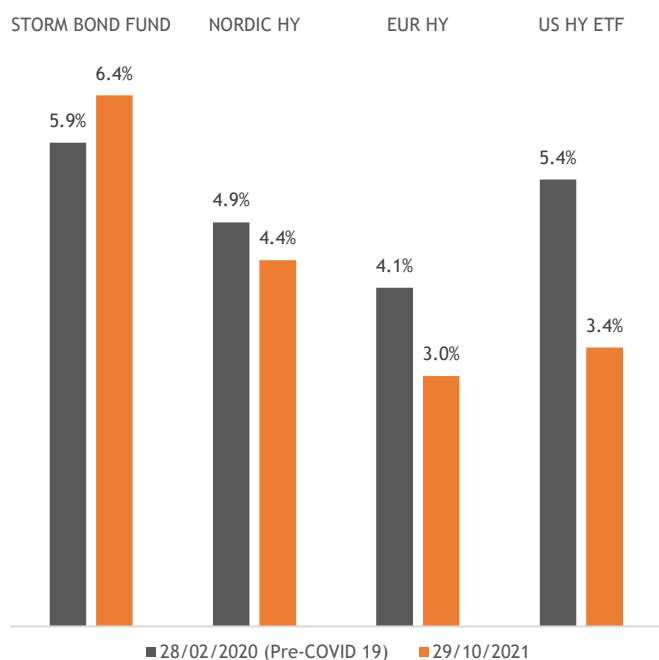

KKR/Ocean Yield reverted back to bondholders with another attempt to address the change of control as a result of the impending takeover of Ocean Yield. The new deal included a margin increase of 50bps, increased call premiums and early redemption prices and an increased amendment fee of 1%. We view the new terms and structure combined with KKR's commitment to be very positive for the credit story ahead. The fund's largest negative contribution came from our position in Desenio's 1st lien bond after having reported soft Q3/21 figures. Despite lowering both growth and margin expectations going forward the company is in position to significantly deleverage its balance sheet through its strong cash conversion. The NIBD/EV is currently at -30%.

October was an active month for the fund. We participated in Golar LNG, Tidewater and Rederi Eckerö's bond issues. Golar LNG issued a USD 300m bond maturing in 4 years with a coupon of 7%. Golar LNG was established 75 years ago and has today developed into a leading integrated LNG company with a market cap of USD ~1.4bn. The company has over the last year been through a transformative period through its sale of Golar LNG Partners and Hygo (Golar Power) to New Fortress Energy for USD 130m in cash and 8.9% ownership in the listed New Fortress Energy currently valued at USD 560m. This has in our view simplified the business model and strengthened the capital structure of the company. The credit is further supported by a strong FLNG backlog, improving market fundamentals for its LNG carriers, solid liquidity position and debt service capacity.

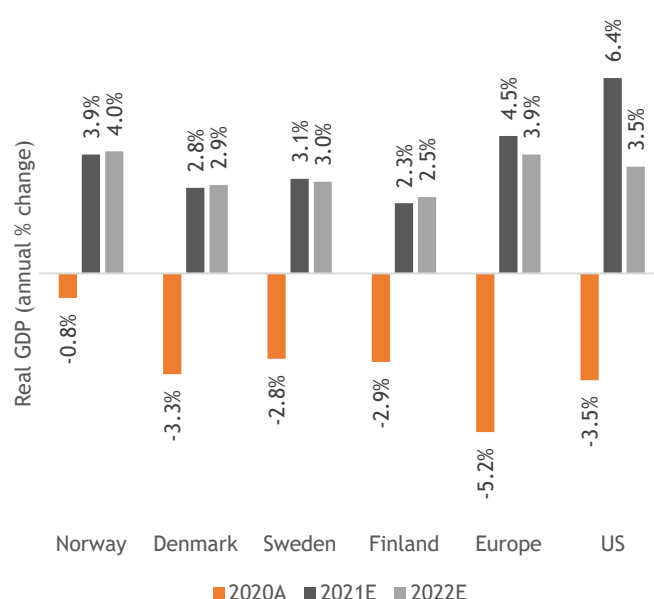

Tidewater issued a USD 175m secured bond maturing in 5 years carrying a coupon of 8.5% (issued at 98.5%). The company is one of the largest providers of offshore supply vessels and marine support services globally and is listed with a market cap of USD 500m. The credit benefits from the company's strong market position paired with free cash flow and low debt levels in an improving market. Based on latest valuations, we estimate gross LTVs at low ~20% through the lifetime of the bond. Rederi Eckerö issued a EUR 62m secured bond maturing in 5 years at EURIBOR + 700bps (with floor). The company owns and operates passenger, car and cargo ferries between Åland and Sweden and Helsinki and Tallinn. Eckerö was prior to covid profitable and low levered. As the region is reopening, we expect earnings to normalize gradually which would significantly deleverage the company. The bonds are issued by the parent company and pledged in two of Eckerö's ferries with an estimated gross LTV of 77% adding another layer of defence in the event that the recovery would take materially longer time. We initiated a position in Stockmann's secured bond with pledge in Lindex in the secondary market. The bond is in our view significantly over-collateralized and prevents the company from paying dividends which we think will lead to an early call and boosting bondholder returns. Lastly, our position in Eagle Bulk was as expected called during the month as the company refinanced the upcoming secured bond maturity with bank financing.

We continue with our selective credit approach targeting solid risk-adjusted returns (current credit spread of ~640 bps in the fund) while at the same time protecting capital by being exposed to a diversified portfolio of quality Nordic high yield bonds with attractive implied valuations, sound balance sheets and solid debt service capacity. This in combination with having access to liquidity through a solid cash position (5-10%) enabling us to manage any unforeseen volatility but at the same time keeping necessary capital for investment opportunities arising in the market. In addition, the fund holds significantly shorter maturity and modified duration (0.6 years) and is therefore well positioned for inflation and future rate hikes.
