COMMENT BY PORTFOLIO MANAGERS

Dear investor,

Storm Bond Fund posted a negative return of -1.3% in June and is up 1.4% YTD (institutional IC NOK share class: LU0840158496).

Developed markets experienced its most challenging first half of a year since 1970 driven by high inflation, rising interest rates, covid restrictions in China and the ongoing war in Ukraine. In June, investor worries were further fueled by concerns that central banks' monetary tightening policy could tilt major economies into recession. The US and European equity markets measured by the S&P 500, Euro Stoxx 600 and MSCI Nordic declined by more than 8% during the month. In the credit market, higher interest rates paired with widening credit spreads resulted in global investment grade and US and European high yield corporate bonds declining by -3.2%, -6.7% and -6.8% respectively. The broader Nordic high yield market and Storm Bond Fund declined by -2.5% and -1.3% respectively. On a relative basis, the Nordic high yield market was helped by lower duration risk and higher coupon carry compared to other international high yield markets.

The fund's performance was impacted by the adverse market conditions which resulted in credit spreads widening and consequently bond prices declining across our holdings. The fund's largest negative contributions came from our retail exposure which is currently experiencing slower consumer spending paired with higher marketing cost and supply chain difficulties. This exposure is 1st lien which provides bondholders with solid asset backing and debt service capacity. We deem the current elevated yield levels to more than reflect the current market environment.

The fund’s largest positive contribution came from our position in DOF Subsea. During the month the company announced that it had reached a restructuring agreement with its key stakeholders. Post restructuring, the company will be well capitalized going into to an energy services market which has significantly improved. Hence, we see healthy recovery values for bondholders going forward.

As described in our previous monthly reports we have positioned our fund for volatility through having a strong liquidity position paired with being exposed to solid Nordic credits with lower duration. We acknowledge that markets may remain challenging going forward and we will therefore continue our strong focus on capital preservation/downside protection. At the same time, we are carefully beginning to take some high-quality opportunities which has emerged under the current market conditions. We have increased our position in Stena 2024 at 9.5% yield, re-initiated positions in Wallenius Wilhelmsen 2024 and 2026 at ~8% yield and initiated a new position in Crayon 2025 at 7.5% yield. Stena is one of the largest conglomerates in the Nordic region with assets exceeding SEK 100bn. The company is well diversified across several sectors such as real estate, industrials, shipping & transportation and energy services. The credit metrics is improving with leverage levels trending lower combined with having one of the strongest liquidity positions in our market. The company has limited debt maturities prior to the 2024 bond maturity which together with the strong liquidity position puts 2024 bondholders in a strong position in our view. Wallenius Wilhelmsen is listed on the Oslo Stock Exchange with a market cap of more than 20bn. The company has a long and solid track-record in the Nordic corporate bond market. The credit is supported by strong earnings outlook, moderate leverage level, solid liquidity position and significant debt service capacity. Crayon is a leading cloud and IT consultancy in the Nordics. The company is listed on the Oslo stock exchange with a market cap of NOK 11bn. The credit benefits from recurring cash flow with solid conversion rates and a low levered balance sheet. We consider the three abovementioned companies to be prime high yield credits in our region. Current credit spreads are 1.5-2x normalized spreads which we find attractive given the strong downside protection.

The Nordic high yield market with its lower modified duration, higher credit spreads and low correlation to international high yield markets stands out as a differentiator in the fixed income universe. The yield in the fund is currently 9.1% in NOK - well above historical averages and pre-pandemic levels. The modified duration remains low at 0.8 years which makes the fund less sensitive to changes in inflation and interest rate expectations. We continue with our selective fundamental approach targeting well capitalized and renown Nordic companies with solid cash flow prospects and debt service capacity paired with sustainable capital structures. This in combination with having access to liquidity through a prudent cash position of ~5-10% and a further ~5% in high grade bonds enabling us to manage through volatility and act on attractive investment opportunities.
